The inventions relating to claims 1 and 8 do not appear to involve an inventive step based on documents 1-4.

Document 1 describes a disposable wearing article in which an elastic member is provided to the back of an absorbent body at substantially its middle position in the width direction, which is at a predetermined length and substantially linear.

Providing an elastic member provided on the back of an absorbent body in an hourglass shape extending forwardly and rearwardly at its center part in the width direction is conventional and well-known art as can be seen in document 2 (Par. No. [0033], Figs. 6 and 7), document 3 (Fig. 2) and document 4 (Fig. 4B).
